Metawallet

Making cross-chain finance as simple as sending an email

Identity-First Multi-Chain Wallet

The Web3 UX Crisis

Current Web3 Experience

- **Fragmented**: Multiple addresses, networks, gas tokens

- **Complex**: Manual bridging, seed phrases, technical barriers

- **Excluding**: Mass adoption blocked by terrible UX

Our Solution: Metawallet

Identity-First Multi-Chain Wallet

- **Email signup** Instant Solana + Ethereum wallets

- **@username** Works across all chains

- **One USD balance** Hide blockchain complexity

- **Pay gas with USDC** Zero friction experience

How It Works

5-Step User Journey

1. Sign Up Email Web3Auth creates Solana + Ethereum wallets

2. Choose Identity Pick `@alice` Verified across SNS + ENS

3. Unified Balance See combined USD value from all chains

4. Send Money `@bob` or address Auto-bridge + USDC gas send

5. Receive Payments Solana Pay QR codes Instant settlement

Key Technologies

- **Web3Auth**: Email login, no seed phrases

- **SNS + ENS**: Universal @username identity

- **USDC Paymaster**: Gas fees paid with USDC (no ETH needed)

- **Circle CCTP**: Automatic cross-chain bridging

- **Solana Pay**: QR code payments

Why Metawallet Wins

Feature	Metawallet	Traditional Wallets
Onboarding	Email signup	Seed phrases
Identity	Universal @username	Multiple addresses
Balance	Single USD amount	Per-chain breakdown
Gas Fees	USDC Paymaster	Native tokens needed
Cross-Chain	Automatic bridging	Manual operations

Advanced Features

- **Chain Abstraction**: Solana + Ethereum feel like one wallet

- **Smart Bridging**: Auto CCTP when sending cross-chain

- **Contact Management**: Save @usernames for easy repeat sends

- **Unified History**: All transactions in one timeline

Current Status

- Web3Auth integration complete

- SNS + ENS username system working

- USDC Paymaster implemented

- Circle CCTP bridging active
